

Semi-Automatic Powder Filling Machine

This semi-automatic powder filling machine is designed for precise and efficient filling of various powders into containers. It features a stainless steel construction for durability and hygiene, making it suitable for food, pharmaceutical, and chemical industries.

Overview

Precision Powder Filling Solution

This semi-automatic powder filling machine is engineered for the precise and efficient packaging of diverse powder products. Constructed with high-grade stainless steel, it ensures optimal durability and hygiene standards suitable for food, pharmaceutical, and chemical processing environments. The system integrates advanced weighing technology and adjustable filling parameters to accommodate varying powder densities and container sizes, delivering consistent performance for professional industrial applications.

Technical Specifications

Construction Material	Stainless steel
Filling Mechanism	Screw conveyor and weighing system
Safety Features	Overload Protection, Emergency Stop

Operational Features

Operational Highlights

1 Adjustable
Filling Control

1 Adjustable
Speed Control

Suitable Industries

Food Industry • Pharmaceutical • Chemical

Maintenance

- Easy to clean design
- Simplified maintenance protocols
- Integrated control panel for parameter adjustment
