

Semi-Automatic Tissue Packing Machine

This semi-automatic tissue packing machine efficiently packages tissue products. Its stainless steel build and pneumatic sealing provide durability and secure, consistent packaging.

Overview

Efficiency in Tissue Packaging

The semi-automatic tissue packing machine provides a streamlined solution for the loading and sealing of various tissue products, including face tissues and napkins. Designed with a robust stainless steel construction, it ensures both operational durability and high standards of hygiene. The integrated PLC control and LCD interface allow for precise parameter management, while the conveyor system facilitates smooth, automated product positioning.

Technical Specifications

Machine Power

0.4 KW

Power Rating

| | |
|------------------------|--------------|
| Production Speed | 15 packs/min |
| Operating Air Pressure | 0.8 Mpa |

Dimensions

| | |
|----------------------------|-------------------------------|
| Machine Dimensions (LxWxH) | 2500 x 900 x 1300 mm |
| Supported Packing Size | 100-200 x 100-200 x 40-120 mm |

Key Features

Machine Capabilities

- Automated conveyor belt transport
- Automatic tissue arraying
- Integrated sealing and cutting
- Adjustable fork angle bag insertion
- PLC control with LCD parameter setting
