

# Semi-Electric Pallet Stacker

This semi-electric stacker is designed for lifting and transporting goods in warehouses and factories. It combines manual and electric operation, providing a balance of cost-effectiveness and efficiency.

## Overview

### Versatile Material Handling

The Semi-Electric Pallet Stacker is a highly efficient material handling solution designed for diverse warehouse and industrial environments. Combining manual propulsion with an electric lift system, it offers an optimal balance of cost-effectiveness and operational precision. This equipment is specifically engineered to reduce operator fatigue during vertical lifting tasks while maintaining the agility needed for tight maneuvering.

## Performance Metrics

### Load Capacity

**1500 kg**

Load Capacity

**3000 mm**

Max Lifting Height

## Technical Details

### Ideal Applications

- Warehouse logistics
- Factory floor material handling
- Light to medium-duty stacking
- Tight-space operations

### Operation Mode

Manual Propulsion, Electric Lift

## Design Features

### Key Design Features

Adjustable Forks • Robust Mast Construction • Compact Design • Fatigue Reduction
