

# Serpentine Heating Element for Ovens

This serpentine-shaped heating element is designed for ovens and similar appliances, ensuring uniform heat distribution. It features terminal connectors for electrical connection and is supported by a central metal brace.

## ADDITIONAL IMAGES

## Product Overview

### High-Efficiency Heating Element

This serpentine-shaped heating element is engineered specifically for ovens and similar heating appliances. Constructed from durable tubular metal, it is designed to provide uniform heat distribution throughout the appliance chamber. Its robust design includes a central metal brace and secure clamps to maintain shape and structural integrity during operation.

## Technical Specifications

### Support Structure

- Central metal brace
- Secure clamps
- Supporting rods and brackets

Material	Tubular Metal
Design	Serpentine
Terminals	Dual electrical terminal connectors

## Application

Primary Applications	Ovens, Heating Appliances, Industrial Heating
