

Server Cabinet Enclosure

This server cabinet is constructed from heavy-duty steel for exceptional durability and stability. It features perforated doors and side panels for optimal airflow and adjustable mounting rails to accommodate various equipment sizes.

Product Overview

Robust Server Infrastructure Protection

The FCA-A Server Cabinet is a versatile, heavy-duty steel enclosure designed to house and protect critical IT infrastructure. It features perforated doors and side panels to ensure optimal airflow, preventing overheating in demanding server environments. With adjustable mounting rails, integrated cable management, and lockable security features, this cabinet provides a secure and organized solution for data centers and server rooms.

Key Features

Security & Mobility

Lockable Doors, Lockable Side Panels, Casters Included, Leveling Feet
