

Servo Drive Module with Ethernet and Serial Communication

This servo drive module provides precise control for industrial automation. It features multiple communication ports, including Ethernet and serial connections, and is designed with a heat sink for thermal management.

Product Overview

High-Performance Servo Drive Module

This advanced servo drive module is engineered for precision motion control and industrial automation tasks. It features robust connectivity options, including integrated Ethernet and serial communication ports, allowing for seamless integration into complex control systems. The unit is designed with an efficient heat sink to ensure optimal thermal management during demanding operation cycles.

Technical Specifications

Communication Interfaces	Ethernet, Serial
Connection Type	Terminal block connectors for power and signal interfaces
Thermal Management	Yes

Applications

Primary Applications

- Industrial Automation
- Motion Control Systems
