

Servo Motor Micromotor

This servo motor micromotor is designed for precision control applications. It features robust construction and efficient copper windings for reliable power delivery.

Product Overview

Robust Single-Phase Power Solutions

The YC series heavy-duty single-phase motors are engineered for precision and reliability in demanding environments. Featuring 100% copper windings for optimal power delivery, these units are ideal for small machine tools, water pumps, and family workshop applications. Designed to comply with international IEC standards, they offer outstanding performance and easy maintenance.

Technical Specifications

Power Output

1.5 HP

Horsepower

Electrical Characteristics

Parameter	Value
Voltage	220 V
Current	10.5 A
Frequency	50 Hz

Standards and Compliance

Compliance and Standards

IEC Standard, ISO 9001, GB/T 22719.1-2007, IP54 Protection

Construction

Build Features

- 100% copper windings
- Durable green housing
- Integrated connection box
- Compact design
