

Seven Roller Pipe Straightening Machine

The seven roller pipe straightening machine is mainly used for oil pipeline straightening work. It is designed as special equipment for oil field applications.

Product Overview

Industrial Pipe Straightening Solution

The Seven Roller Pipe Straightening Machine is specialized equipment designed primarily for oil field operations. It effectively restores bent tubing to its original, usable state, significantly reducing replacement costs for oil field infrastructure. Beyond oil applications, the machine is versatile enough to handle the straightening of various thin-walled pipes.

Technical Details

Straightening Method	Seven-roller configuration
Primary Applications	Oil Pipeline Maintenance, Oil Field Tubing Recovery, Thin-walled Pipe Straightening
Roller Count	7
