

Sewage Submersible Pump with Float Switch

This sewage submersible pump is designed for efficient wastewater management. It features a float switch for automatic operation and is suitable for handling solids and debris.

Product Overview

High-Efficiency Wastewater Management

The sewage submersible pump is engineered for robust performance in demanding wastewater management tasks. Featuring durable construction capable of handling solids and debris, it ensures reliable operation in residential, commercial, and industrial settings. The integrated float switch provides seamless automatic functionality by monitoring varying water levels.

Key Performance

Performance Highlights

180 W

Power Rating

250 W

Peak Power Rating

Operational Features

Core Features

- Automatic float switch for water level control
- Submersible design for quiet operation
- Capable of handling solids and debris
- Durable construction for long-term reliability

Applications

Recommended Usage

Residential Drainage, Commercial Wastewater, Industrial Sewage Transfer, Submersible Applications
