

SFTP Double Shielded Twisted Pair Category Cable

This SFTP (Shielded Foiled Twisted Pair) cable is designed for demanding networking applications. It features double shielding for superior EMI/RFI protection and reliable data transmission in noisy environments, with 4 twisted pairs to minimize crosstalk and maximize signal integrity.

Product Overview

High-Performance Networking Solution

This SFTP cable is engineered for demanding professional networking environments where signal integrity is paramount. Featuring advanced double shielding, it provides superior protection against EMI and RFI interference to ensure consistent data transmission. The robust four-pair twisted design minimizes crosstalk, making it an ideal choice for high-bandwidth category-rated installations.

Technical Specifications

Shielding

Double Shielded • EMI Protection • RFI Protection

Cable Type

SFTP (Shielded Foiled Twisted Pair)

Twisted Pairs

4

Key Features

Primary Benefits

- Superior EMI/RFI noise immunity
- Minimized internal crosstalk
- High signal integrity
- Robust construction for professional use
