

Sheet Metal Bending Brake

This is a sheet metal brake, also known as a bending brake or metal bender. It is a machine tool used to bend sheet metal into desired shapes.

Overview

Precision Sheet Metal Bending

This manual sheet metal bending brake is a robust machine tool engineered for reliable metalworking applications. It features a secure clamping mechanism to hold workpieces firmly in place, combined with a pivoting bending leaf that ensures consistent, accurate bends. Designed for durability and ease of use, this equipment is an essential solution for workshops requiring high-quality sheet metal forming.

Key Features

Operation Type

Manual Lever Operation

Build Quality

Sturdy Frame, Industrial Grade

Performance

Primary Function

Sheet metal bending and forming

Mechanism

Pivoting bending leaf with integrated clamping system
