

Sheet Metal Cutting and Folding Machine

This metal forming machine is designed for cutting, folding, and bending metal sheets. It features a robust frame, a precision cutting mechanism, and a versatile bending system.

Overview

Versatile Sheet Metal Processing

This sheet metal cutting and folding machine is engineered for precision metal forming tasks, including cutting, folding, and bending. Built with a robust frame, it ensures stability and durability for demanding industrial environments. The integrated versatile bending system and intuitive control panel allow operators to adjust parameters easily, ensuring accurate and efficient processing for a wide range of metalworking applications.

Capabilities

Core Functions

Cutting, Folding, Bending

Design & Construction

Build Quality

Robust Frame • Precision Mechanism

Control & Operation

Control Features

- Adjustable parameters
- Performance monitoring
- Operator control panel
