

Ship to Shore Container Crane

Ship to shore container cranes are specialized lifting equipment used for loading and unloading containers in port facilities. These cranes are designed for high-volume operations and feature advanced control systems for precise positioning.

Product Overview

High-Efficiency STS Solutions

This Ship to Shore (STS) container crane is a specialized solution engineered for high-volume loading and unloading operations at container terminal quaysides. By leveraging over a century of accumulated engineering expertise and innovative design, this equipment ensures exceptional reliability and safety in demanding port environments. The crane features a robust structural frame and advanced control systems, offering terminal operators optimized handling capability and maximum uptime.

Operational Capabilities

Primary Application	Container terminal quayside handling
Integrated Equipment	Container Spreader, Trolley System, Hoist System

Technical Features

Key Performance Indicators

100 % Availability Focus

Operation Efficiency

Design & Safety

- Robust structural frame for stability
- Advanced control systems for precise positioning
- High-volume operational capacity
- Optimized for heavy container logistics
