

Shipping Container for Packaging Machinery

This standard shipping container is used in packaging machinery applications for transporting goods or components. Its dimensions conform to standard intermodal container specifications, facilitating efficient handling and stacking in ports, rail yards, and storage facilities.

Product Overview

Robust Logistics Solution

This standard shipping container is engineered specifically for the secure transport of packaging machinery and industrial components. Featuring a robust steel frame construction and durable corrugated walls, it offers superior resistance to environmental elements during transit. The design adheres to standard intermodal specifications, ensuring seamless compatibility with global port, rail, and storage infrastructure.

Design & Construction

Material	Steel
Wall Design	Corrugated

Security & Handling

Locking Mechanism	Yes
Handling Compatibility	Forklift Compatible, Crane Compatible, Stackable

Logistics Compatibility

Intermodal Standard
Standard Intermodal

Primary Usage

- Packaging Machinery Transport
- Component Logistics
- Industrial Storage
