

Shrimp Chips Production Line, 400 kg/h

This automated system is designed for efficient and consistent production of shrimp chips at a rate of 400kg/h. The production line integrates mixing, extrusion, slicing, frying, seasoning, and packaging.

Product Overview

Automated Shrimp Chips Production

This high-capacity shrimp chips production line is designed for efficient, continuous manufacturing of shrimp crackers. The system integrates multiple processing stages including feeding, extrusion, molding, cutting, drying, frying, and packaging. Engineered for consistent performance, it features automated temperature control and adjustable parameters to ensure high-quality output while maintaining strict hygiene standards.

Technical Details

Line Components

- Feeder
- Extruder
- Molding Machine
- Cutting Machine
- Dryer
- Fryer
- Packaging Machine

Operational Features

Key Advantages

Automatic Temperature Control, Smokeless Emissions, Adjustable Cutting Speed, Uniform Heating, Modular Design

Construction

Construction Material

Stainless Steel
