

Shrink Wrap Packaging Machine

This shrink wrap packaging machine is designed for efficient and reliable shrink wrapping. It utilizes a heat tunnel to tightly wrap items with shrink film, providing tamper-evident packaging and enhanced product presentation.

Overview

Shrink Packaging Machine 4035

This advanced shrink packaging solution utilizes heat-tunnel technology to create a tight, professional wrap around products. By applying controlled heat to the shrink film, the machine secures items, protecting them from moisture, pollution, and external impact. Its robust design is ideal for batch bundling and enhancing the aesthetic value of small items, making it an essential tool for efficient retail-ready packaging.

Technical Specifications

Max Shrink Size	400 mm
Physical Dimensions (L x W x H)	200 x 600 x 900 mm
Machine Weight	60 kg

Performance Metrics

Key Performance Indicators

7 Kw Total Power	5 kg Load Capacity	300 °C Max Temperature
----------------------------	------------------------------	----------------------------------

Conveyor Speed	0 - 10 m/min
----------------	--------------

Electrical Requirements

Input Voltage	220V, 380V
Frequency	50 Hz

Applications

Best For

- Small product retail packaging
- Multi-item bundling
- Tray packaging
- Tamper-evident sealing
