

Side Milling Cutter

This high-speed steel side milling cutter features alternating teeth for efficient material removal. Its robust design ensures increased durability and precision in demanding machining applications, suitable for slotting, grooving, and side milling.

Product Overview

High-Performance Machining Tool

This high-speed steel side milling cutter is engineered with alternating teeth to ensure efficient and consistent material removal. Its robust construction provides the durability and precision required for demanding machining operations. It is an ideal solution for professionals requiring reliability in slotting, grooving, and side milling applications across various material types.

Technical Specifications

Suitable Applications

- Slotting
- Grooving
- Side Milling

Quality Standards

High Precision

Material

High-Speed Steel (HSS)

Design Features

Alternating Teeth, Robust Design
