

Signal Transmission Antenna

This specialized antenna is designed for optimal signal reception and transmission. It features a durable construction with a flexible, spring-loaded base to withstand various environmental conditions and mechanical stresses.

Product Overview

JBA-504 Signal Transmission Antenna

The JBA-504 is a specialized antenna engineered for optimal signal reception and transmission in demanding environments. Featuring a durable construction with a flexible, spring-loaded base, this unit is designed to withstand mechanical stresses and varying environmental conditions. Its compact form factor ensures seamless integration into existing setups, making it a reliable solution for mobile radio, wireless data transmission, and telemetry applications.

Technical Specifications

Model Number	JBA-504
Design Features	Flexible Base, Spring-loaded, Compact Design, Durable Construction

Applications

Primary Applications

- Mobile Radio
- Wireless Data Transmission
- Telemetry Systems
