

Single-Cylinder Air-Cooled Diesel Engine

This is a single-cylinder, air-cooled, 4-stroke diesel engine with direct injection. It is commonly used in agricultural machinery, construction equipment, and small generators.

Overview

Robust Diesel Power Solution

This single-cylinder, 4-stroke diesel engine is engineered for reliability and efficient performance in demanding environments. Featuring forced air cooling and direct injection, it provides consistent power for a variety of agricultural machinery, construction equipment, and small-scale power generation needs. Its compact design and recoil starter system ensure ease of operation and maintenance for professional users.

Performance Metrics

Maximum Output

6 HP

Max Output

Technical Specifications

Engine Type	Single Cylinder 4-stroke Forced air cooling
Bore x Stroke	78 x 64 mm
Displacement	296 cc

Capacities

Fuel Tank Capacity	3.5 L
Oil Capacity	1.1 L

Compliance

Certifications	CE
