

Single-Cylinder Diesel Engine for Agricultural Machinery

High-performance single-cylinder diesel engine designed for agricultural applications. It delivers efficient power for various tasks such as irrigation, powering machinery, and driving generators.

Product Overview

High-Performance Agricultural Diesel Engine

This single-cylinder diesel engine is engineered specifically for demanding agricultural environments, offering robust construction for long-term reliability. It delivers efficient power suitable for a wide range of applications, including irrigation systems, machinery operation, and power generation. Designed for ease of use, it features a direct fuel injection system, an optimized cooling mechanism, and a reliable start mechanism to ensure consistent performance in the field.

Technical Features

Engine Type	Single-Cylinder Diesel
Fuel System	Direct Fuel Injection
Cooling System	Efficient Cooling System
Start Mechanism	Easy Start Mechanism

Applications

Compatible Equipment

- Tractors
- Tillers
- Water Pumps
- Generators
- Agricultural Machinery

Primary Use Cases	Irrigation, Power Generation, Machinery Operation
