Overview

Reliable Single-Cylinder Power Solution

This single-cylinder petrol engine is engineered for versatility and durability in demanding industrial environments. Featuring a robust construction and an efficient air-cooling system, it is designed to provide consistent performance for machinery such as generators and water pumps. The compact design and easy-start mechanism ensure straightforward operation and maintenance for professional users.

Technical Specifications

Power Output

6.5 HP

Horsepower

Model Identifier

LT200

Cooling Method

Air-cooled

Applications

Primary Uses

Generators, Water Pumps, Industrial Machinery

Key Features

Main Features

- Compact design for space efficiency
- Reliable air cooling system
- Easy-start mechanism
- Robust construction for durability
