

Single Disc Wafer Check Valve

This wafer check valve is designed for installation between flanges. It prevents backflow in pipelines across diverse applications such as oil fields, chemical processing, and environmental protection.

Product Overview

Industrial Single Disc Wafer Check Valve

The single disc wafer check valve is engineered for efficient backflow prevention in industrial pipeline systems. Featuring a compact wafer-style design, this valve is optimized for installation between standard flanges, making it ideal for environments where space is limited. Its durable construction ensures reliable, unidirectional flow control across a wide range of industrial fluid applications.

Technical Specifications

Body Material

- Stainless Steel
- WCB (Carbon Steel)

Compliance

API Standard

Performance Rating

673

Model/Series Reference

Configuration Options

Wafer Swing Check, Single Disc, Single Door

Nominal Size

150 DN
