

Single Drum Vibratory Road Roller

This single drum vibratory road roller is designed for compaction of soil, asphalt, and other materials. It features vibration bearing rat bag forced lubrication technology to ensure efficient bearing use.

Overview

High-Performance Single Drum Vibratory Roller

This professional-grade single drum vibratory road roller is engineered for efficient compaction across diverse soil and asphalt applications. It features advanced vibration bearing technology with forced lubrication for enhanced durability and a streamlined design meeting international safety standards. With its panoramic cab, intelligent electronic control system, and operator-focused ergonomic design, it ensures maximum productivity and comfort on demanding construction sites.

Operator Comfort

Cabin Comfort & Ergonomics

- Level 4 vibration reduction
- Panoramic view cabin
- Built-in air-conditioning and heating
- Ergonomic operator accessories (teacup holder, coat hooks)

Maintenance

Maintenance Features

Rear pump placement, Accessible maintenance points, Engine multi-stage filtering, Intelligent fault diagnosis

Technical Specifications

Compliance

International Safety Standard 1m x 1m

Thermal Control

Advanced power system heat transfer control to prevent air turbulence and ensure efficient cooling performance.
