

# Single Phase Two Wire Energy Meter

This single-phase two-wire static energy meter is designed for measuring electrical energy consumption. The meter operates at 220VAC, 60Hz, with a current rating of 10(40)A and includes reverse indication and a 1600 imp/kWh pulse output.

## Product Overview

### Professional Energy Metering Solution

This single-phase two-wire static energy meter is designed for precise measurement of electrical energy consumption in residential and commercial environments. It adheres to international quality and safety standards, ensuring reliable performance across various power grids. Widely utilized in South American and Asian markets, it offers robust construction and consistent accuracy for utility monitoring.

## Technical Specifications

### Available Current Ratings

- 10-60A
- 5-60A
- 5-100A

Rated Voltage	220-240V
Rated Frequency	50 Hz
Accuracy Class	1

## Compliance and Standards

### IEC Standards

- IEC62052-11
- IEC62053-21

Certifications	KEMA Certified, CE Certified
