Product Overview

Remote Server Management Solution

This Single Port KVM over IP device enables secure, BIOS-level remote access to servers and computers from anywhere via a standard web browser. It effectively redirects local keyboard, mouse, and video data to a remote administration console, facilitating maintenance, troubleshooting, and failure recovery. Designed for flexibility, it supports integration with existing KVM switches for multi-server management environments.

Technical Capabilities

Connectivity

- Standard IP network access
- Remote administration via web browser
- Local KVM switch integration support

Security Protocols	SSL Authentication, Data Encryption, BIOS-level Access
Manufacturing Origin	Taiwan
