

Single Row Angular Contact Ball Bearing

This single row angular contact ball bearing is designed for high performance and durability. It supports combined radial and axial loads and offers exceptional performance.

Product Overview

High-Performance Angular Contact Bearings

These single row angular contact ball bearings are engineered to support both radial and axial loads simultaneously, making them ideal for high-speed industrial applications. With optimized geometry, they offer high precision and extended service life in demanding environments. They are specifically designed for applications requiring precise positioning, such as machine tools and high-efficiency pumps.

Technical Specifications

Key Performance Attributes

- High-speed operation capability
- High precision engineering
- Long life cycle
- Excellent axial displacement limitation

Load Directionality	Radial Load, Unidirectional Axial Load
Standard Contact Angle	15 degrees

Market Benefits

Why Choose This Bearing

Competitive Pricing • Strong Availability • Timely Delivery
