

Single Row Diamond Cup Wheel for Grinding

This diamond cup wheel is designed for grinding concrete, stone, and masonry materials. Its segmented design ensures aggressive grinding while minimizing heat buildup, making it suitable for use on angle grinders.

Product Overview

Professional Grinding Performance

This single row diamond cup wheel is engineered for high-efficiency material removal on concrete, stone, and masonry surfaces. Its robust steel body and diamond-impregnated segments ensure durability and consistent performance during demanding surface preparation tasks. The segmented design is specifically optimized to minimize heat buildup, allowing for aggressive grinding and leveling while extending the tool's overall service life.

Technical Specifications

Primary Applications

- Surface preparation
- Surface leveling
- Coating removal

Key Features

Single Row Segment • Heat-Resistant Design • Steel Body Construction

Compatible Materials

Concrete, Stone, Masonry

Compatibility

Compatible Tools

Angle Grinders
