

Single Row Diamond Cup Wheel

These single row cup wheels are designed for aggressive grinding and material removal on concrete, stone, and masonry surfaces. The segmented rim ensures optimal dust extraction and cooling.

Product Overview

Professional Diamond Grinding Solutions

Single row diamond cup wheels are engineered for aggressive grinding and efficient material removal on concrete, stone, and masonry surfaces. These tools feature a robust steel body paired with high-quality diamond segments designed for optimal dust extraction and cooling. They are an ideal choice for demanding surface preparation, leveling, and coating removal applications, ensuring longevity and consistent performance.
