

Single Share Plough for Soil Tillage

This single share plough is a robust agricultural tool designed for primary tillage operations, efficiently turning and breaking soil. It features a durable frame, replaceable share point, and adjustable depth control for diverse soil conditions.

Product Overview

Efficient Soil Tillage Solution

The 1LS-125 single share plough is a robust agricultural tool engineered for primary tillage operations, effectively turning and breaking soil to prepare land for planting. It features a durable frame construction and a sharp, replaceable share point designed for deep soil penetration across various conditions. This manually operated implement offers a cost-effective and versatile solution for small to medium-sized farms seeking consistent furrow quality and improved seedbed preparation.
