

Single Stage Double Suction Water Pump

Designed for transferring clear water or other liquids with similar physical and chemical properties. The single-stage design provides efficient pumping action, while the double configuration enhances flow capacity.

Product Overview

GS Series Efficiency Pump

The GS series is a high-performance, single-stage double-suction pump engineered for demanding industrial fluid transfer. Designed for versatility, it efficiently handles clear water, as well as sewage, sea water, and muddy water when equipped with anti-corrosion and anti-friction materials. Its robust construction and optimized hydraulic pathways ensure minimal energy consumption and reliable, long-term operation across various sectors.

Applications

Suitable Industries

Iron & Steel, Petrochemical, Thermo Power Plants, Mining, Municipal Water Supply, Heating Systems, Irrigation

Technical Features

Compatible Fluids

- Clear water
- Sewage
- Sea water
- Muddy water (with appropriate materials)

Material Options

Anti-corrosion • Anti-friction

Pump Design

Single-stage, double-suction impeller
