

Sintered Diamond Saw Blade for Hard Materials

This sintered diamond blade is designed for cutting hard materials like tile, ceramic, and stone. It features a segmented rim for efficient debris removal and cooling, ensuring clean and precise cuts.

Product Overview

Professional Sintered Diamond Blade

This high-performance sintered diamond blade is engineered for cutting hard building materials including tile, ceramic, porcelain, and natural stone. Featuring a durable metal matrix with high-quality diamond particles, it provides exceptional wear resistance and a significantly extended service life. The design incorporates a segmented rim to facilitate efficient debris removal and cooling, ensuring precision in every cut while minimizing vibration and noise.

Technical Specifications

Compatible Equipment

- Hand-held Circular Saws
- Angle Grinders

Suitable Materials

Brick, Tile, Concrete, Stone, Ceramic, Porcelain

Usage Environment

Wet Cutting, Dry Cutting
