

Skid Steer Loader Excavator Arm Attachment

This excavator arm is a versatile attachment designed to enhance the functionality of skid steer loaders. It enables efficient digging and excavation tasks in confined spaces.

ADDITIONAL IMAGES

Overview

Versatile Excavation Attachment

This rotary excavator arm attachment is designed to significantly enhance the functionality of skid steer loaders, enabling efficient digging and excavation tasks in confined spaces. Engineered for durability and precise control, it provides a cost-effective solution for construction, landscaping, pavement maintenance, and road construction projects. The attachment features a robust construction and a rotary mechanism that ensures reliable performance in demanding working environments.

Key Features

Performance Highlights

- Robust structural design for stability and comfort
- Hydraulic couplers for quick attachment changing
- Pilot joystick control for sensitivity and accuracy
- Vertical lift capability for maximum height and reach

Operator Experience

Cab & Operator Comfort

Front door seal, Anti-collision cage, Seat belt, Ergonomic pilot joystick, Optional seat warmer, Optional air conditioner

Maintenance

Simplified Maintenance

The design prioritizes efficient serviceability to maximize productivity. Inspection and filling tasks are streamlined through an easy-to-open upper and back hood, providing quick access to major components without the need to move the loading arms.

Serviceability

Yes
