

Sliding Metal Plate with Cutouts

This metal plate features a sliding element and several cutouts. It is suitable for various mechanical applications requiring precise movement and secure mounting.

Product Overview

Precision Sliding Metal Plate

The D777A-C is a precision-engineered sliding metal plate designed for seamless integration into mechanical assemblies and locking mechanisms. Featuring a durable stamped metal construction with a high-quality finish, this component offers reliable performance for industrial applications. Its versatile design includes multiple mounting points and keyhole-shaped slots to ensure secure and flexible installation.

Technical Details

Finish

Shiny Finish • Stamped Metal

Key Features

- Central sliding element
- Multiple mounting holes
- Keyhole-shaped slots

Model Number

D777A-C
