

Slotted Countersunk Head Wood Screws

Slotted head wood screws are designed for secure fastening in wood applications. Featuring a countersunk head with a slotted drive, these screws provide a flush finish and ease of installation.

Product Overview

Slotted Countersunk Head Wood Screws

These slotted countersunk head wood screws are engineered for robust fastening in diverse woodworking applications. Featuring a precise countersunk head design, they allow for a perfectly flush finish that enhances the aesthetic quality of your projects. The inclusion of sharp, high-performance threads ensures exceptional holding power and resistance to pull-out, providing long-term structural reliability. These screws are available in a variety of lengths and material specifications to accommodate different wood densities and project requirements.

Technical Specifications

Head Type	Countersunk
