

Slotted Pin for Chain Link Assemblies

This slotted pin is designed for use in chain link assemblies. It features a precision-machined slot for secure and reliable chain connection.

Product Overview

Precision Engineering for Chain Assemblies

This slotted pin is specifically engineered for high-performance chain link assemblies. Designed to ensure proper alignment and smooth operation, it provides a secure and reliable connection point within industrial systems. Its robust construction is optimized for demanding environments, offering long-lasting durability and consistent mechanical performance.

Technical Specifications

Key Design Features

- Precision-machined slot
- High-durability material construction
- Engineered for secure connection
- Optimized for smooth chain operation

Model Identifier

103

Component Type

Slotted Pin

Primary Application

Chain Link Assemblies, Industrial Machinery, Mechanical Systems
