

Small Air-Cooled Gasoline Engine

This is a general-purpose small engine used in lawnmowers and generators. It is a single-cylinder, air-cooled engine with a horizontal shaft and a cast aluminum cylinder head.

Overview

Compact Power Solution

This small air-cooled gasoline engine is designed for versatile applications requiring a reliable, lightweight power source. Featuring a single-cylinder, horizontal shaft configuration, it is ideal for integration into lawnmowers, portable generators, and similar small machinery. The robust construction includes a cast aluminum engine block and cylinder head with cooling fins, ensuring efficient thermal management during operation.

Technical Specifications

Performance Highlights

1 qty
Cylinders

Engine Type	Single-cylinder, 4-stroke
Cooling System	Air-cooled
Shaft Orientation	Horizontal

Construction & Materials

Key Components

- Integrated cooling fins
- Carburetor assembly
- Oil fill cap
- Flywheel with cooling fan blades

Material Composition	Cast Aluminum Block, Cast Aluminum Cylinder Head
