

Small Boat Outboard Motor

This outboard motor has a 43mmx38mm engine. It is designed for efficient propulsion in marine environments.

Overview

Compact Marine Propulsion

This small boat outboard motor is engineered for efficiency and reliability in marine environments. Featuring a 56cc displacement and a manual recoil starter, it provides consistent power for small watercraft. Its 360-degree swivelling shift control and 4-position trim allow for precise maneuverability and adaptability to different water conditions.

Engine Performance

Displacement	56 cc
Full Throttle RPM	5600 RPM
Number of Cylinders	1
Cooling System	Forced water circulation by pump
Ignition Type	Capacitor Discharge Ignition (C.D.I)

Fuel & Lubrication

Fuel Tank Capacity	1.2 L
Lubrication	2-stroke oil mixed with gasoline

Dimensions & Weight

Net Weight	11.8 kg
Transom Height	370 mm

Technical Details

Gear Ratio	12:25
Shift Control	360-degree swivelling
Trim Positions	4
Propeller Specifications	3 Blade, 186mm diameter, 100mm pitch
