

Small Form Factor Indoor MIMO Antenna

This small form factor MIMO antenna is designed for indoor environments. It supports multiple input multiple output (MIMO) technology, enhancing data throughput and signal quality.

Product Overview

High-Performance Indoor Connectivity

This small form factor MIMO in-building antenna is engineered for optimal performance in diverse indoor environments. It leverages MIMO technology to significantly enhance data throughput and signal quality for reliable wireless connectivity. The discreet design ensures it integrates seamlessly into professional spaces while providing consistent, high-speed data transmission.

Technical Specifications

Compatibility

- Wide range of wireless standards
- Versatile frequency support
- Adaptive to various network configurations

Technology

MIMO, In-Building, Indoor

Physical Attributes

Design

Small Form Factor • Discreet • Robust Construction
