

Small Impact Crushing Machine

This small impact crushing machine is a highly efficient crushing solution with a compact size and simple structure. It offers a high crushing ratio, low energy consumption, and high production capacity for various material processing applications.

Product Overview

High-Efficiency Impact Crushing

This small impact crushing equipment is a highly efficient machine designed for versatile material processing. With a compact and simple structure, it offers a high crushing ratio and low energy consumption while maintaining high production capacity. It is suitable for both dry and wet material technologies, featuring selective rock crushing capabilities and long service life.

Technical Capabilities

Output Fineness Range	60 mesh to 300 mesh
Key Operational Benefits	High crushing ratio, Low energy consumption, High throughput, Selective rock crushing, Dry and wet material compatible

Maintenance & Safety

Maintenance Advantages

- Decreased operational cost
- Simplified maintenance process
- Easy screening face replacement
- Integrated foreign object damage prevention

Safety System	Impact frame fallback mechanism for foreign object discharge
