

Smart Radiator Thermostat Valve

This smart radiator thermostat provides individual radiator control, operating independently. A WiFi gateway enables smartphone control of radiators, while manual adjustments can be made via the display buttons.

Overview

Product feature overview including connectivity, voice control, and installation details.

Smart Radiator Control
The TR-01 smart radiator thermostat enables precise individual control over room temperatures for optimized energy efficiency. It features flexible operation modes including manual adjustment via on-device buttons or remote smartphone control when paired with a WiFi gateway. Designed for versatile compatibility, it supports voice command integration and offers intelligent functions such as open window detection and programmable scheduling.

Technical Specifications

Connection Type	M30 x 1.5 universal
Wireless Frequency	868 MHz
Gateway Control Capacity	8 valves

Features

Ecosystem Compatibility Alexa • Google Assistant • Tuya	
Intelligent Features	Open Window Detection, Frost Protection, 7-Day Programmable, Voice Control, Remote App Access

Certifications

Certifications	CE, RoHS, TÜV SÜD
