

Smooth Drum Road Roller

This compaction machine is used to compact soil, gravel, concrete, or asphalt in the construction of roads and foundations. It features a smooth drum roller for achieving a flat and even surface.

Overview

Professional Compaction Performance

The UTC203 Smooth Drum Road Roller is a robust compaction machine engineered for efficiency in road and foundation construction. Featuring hydraulic double-wheel drive, vibration, and steering, it delivers precise maneuverability and consistent results on soil, gravel, and asphalt. Its durable build ensures reliable performance in demanding environments, offering an optimal balance between quality and cost.

Technical Specifications

Model Identifier

UTC203

Drive System

Hydraulic double-wheel drive

Operational Controls

Hydraulic Vibration, Hydraulic Steering

Application

Primary Applications

- Road Construction
- Site Preparation
- Asphalt Compaction
- Soil and Gravel Stabilization
