

SMT Double Sided Splice Tape

This double-sided tape is designed for splicing component reels in SMT (Surface Mount Technology) equipment. It ensures continuous component feeding, minimizing downtime and maximizing productivity in automated assembly processes.

Product Overview

High-Efficiency Splicing Solution

This double-sided splice tape is engineered specifically for automated Surface Mount Technology (SMT) assembly equipment. It ensures reliable and efficient component reel splicing, which is critical for minimizing downtime and maximizing productivity in high-volume electronics manufacturing. Designed for precision, the tape offers strong adhesive properties and accurate dimensions to maintain continuous component feeding and reduce material waste.

Technical Details

Adhesive Performance

Strong Bonding • High Reliability

Key Features

- Precise dimensions for accurate alignment
- Designed for automated assembly processes
- Reduces material waste
- Supports continuous component feeding

Application

SMT Component Reel Splicing
