

SMT Machine 24mm Feeder

This 24mm feeder is designed for use in SMT pick and place machines. It ensures reliable and accurate component feeding during the automated assembly process.

Product Overview

Precision SMT Component Feeding

This precision-engineered feeder component is specifically designed for 24mm SMT machine feeders. It ensures accurate and reliable component delivery during the automated assembly of electronic circuit boards. Built to exacting standards, this part is optimized for high-speed production environments where durability and consistent performance are critical.

Technical Specifications

Feeder Width	24 mm
Application	SMT Assembly, PCB Manufacturing, Automated Component Feeding

Quality & Standards

Key Performance Attributes

- High-speed production compatibility
- Precision-engineered design
- Enhanced durability for long-term use
- Reliable component delivery
