

SMT Machine Housing for Juki FX-1R

This housing is designed for use in SMT (Surface Mount Technology) equipment. It provides structural support and precise alignment for critical components within the machine, ensuring accurate and reliable component placement.

Product Overview

Precision-Engineered SMT Component

This housing unit is a critical component designed specifically for high-precision SMT (Surface Mount Technology) assembly equipment. It provides essential structural support and ensures precise alignment for internal machine parts, which is vital for maintaining accurate component placement during continuous manufacturing operations. Constructed from high-quality, durable materials, this housing is built to withstand the rigorous demands of an industrial production environment, contributing directly to the machine's overall performance and operational longevity.

Technical Details

Material Grade

High-Quality • Industrial-Grade

Key Features

- Precision alignment support
- Structural integrity for internal components
- Designed for continuous operation
- Enhanced machine longevity

Part Number

40024338

Application

SMT Assembly Equipment
