

SMT Pick and Place Nozzle 500-508

This pick and place nozzle is compatible with SMT KE2010-2080 machines. It is a critical component for automated surface mount technology (SMT) assembly.

Product Overview

Precision SMT Nozzle Series 500-508

The 500-508 series nozzles are precision-engineered components specifically designed for high-speed automated surface mount technology (SMT) assembly. These nozzles ensure accurate and reliable component placement, critical for maintaining high yields in electronic manufacturing. Constructed from high-quality, durable materials, they are built to withstand the rigors of continuous production environments.

Compatibility

Compatible Machine Series

KE2010, KE2020, KE2030, KE2040, KE2050, KE2060, KE2070, KE2080

Technical Specifications

Application

SMT Assembly • Pick and Place

Key Features

- Precision-engineered design
- High-speed production compatible
- Durable construction

Series Identifier

500-508
