

SMT Pick and Place Nozzle for Juki 2050 2060 2080

This high-precision nozzle is designed for use in Juki 2050, 2060, and 2080 series surface mount technology (SMT) pick and place machines. Constructed from durable materials, this nozzle ensures accurate component placement and minimizes errors during the assembly process.

Product Overview

High-Precision SMT Nozzles

These SMT pick and place nozzles are precision-engineered for compatibility with 2050, 2060, and 2080 series automated assembly machines. Designed for high-speed operation, these components ensure reliable component placement and minimal error rates during the surface mount technology assembly process. Constructed from durable, wear-resistant materials, they are built to withstand the rigorous demands of continuous production environments.

Compatibility

Compatible Series	2050, 2060, 2080
