

SMT Vacuum Sensor Board Assembly

This vacuum sensor board assembly is designed for SMT equipment. It features multiple sensors for precise vacuum sensing in surface mount technology processes.

Product Overview

Precision Vacuum Sensing

This high-quality vacuum sensor board assembly is designed for reliable performance in automated SMT placement equipment. Engineered for consistency, the board integrates multiple discrete sensor points to ensure accurate vacuum pressure monitoring during high-speed component mounting. It serves as an essential replacement part to maintain machine precision and operational uptime.

Technical Specifications

Product Condition

Original • New

Part Number	KHY-M4592-010
Number of Sensor Points	10
Production Period	December 2007
Board Marking Code	AFPK-NB 94V-0
