Product Overview

High-Performance Snack Food Extrusion System

This double-screw extrusion machine is engineered for the efficient and continuous production of a wide range of snack foods including chips and extruded products. Constructed from durable, food-grade stainless steel, the system ensures hygiene and long-term reliability in industrial environments. Its modular design and advanced control systems provide precise management of the production process, making it an ideal solution for small to medium-sized food processing facilities.

Technical Specifications

Material	Stainless Steel
Extrusion System	Double Screw
Compatible Raw Materials	Corn, Rice, Wheat

System Features

Integrated Modules

- Feeding System
- Backlog System
- Rotary Cutting System
- Heating System
- Lubrication System
- Control System

Operational Controls

- Touchscreen Interface
- Variable Frequency Drive
- Temperature Control System

Production Capabilities

Process Stages

- Mixing
- Extrusion
- Shaping
- Frying
- Seasoning
- Drying
