

Socket Welded Globe Valve

Globe valve designed for secure socket welded connections. It is suitable for industrial applications requiring precise flow control.

Product Overview

Socket Welded Globe Valve

This globe valve is designed for secure socket welded connections, making it ideal for industrial piping systems requiring robust, leak-proof integration. Engineered according to GB12233 standards, it provides precise flow control and long-term reliability in demanding applications. The valve features a compact design suitable for various nominal diameters, ensuring versatility in installation and maintenance.
