

Socket Welding Flange for Pipe Connection

This socket welding flange is designed for connecting pipes using welding. It features a recessed socket to ensure proper alignment, creating a strong and leak-proof connection for industrial applications.

Product Overview

Socket Welding Flange Overview

This socket welding flange is specifically engineered for robust pipe connections in demanding industrial environments. Designed with a recessed socket to securely receive the pipe, it facilitates precise alignment during the welding process, ensuring a strong and reliable fit. Its durable construction is optimized to provide a leak-proof connection, making it an essential component for critical piping infrastructure.

Technical Features

Design Benefits

- Recessed socket for easy pipe alignment
- Facilitates precise welding
- High-durability construction
- Leak-proof connection integrity

Connection Method

Socket Welding

Primary Application

Industrial Piping, Pipe Connection, Leak-proof Systems
